

1. Difference between i) C & java ii) C++ & java.
2. Explain JVM, JDK, JRE.
3. Write down the features of java programming language.
4. Why Java is called Platform neutral language? What are the common types of Errors in Java.
5. Difference between OOP & POP. Write down the characteristics of OOP & POP.
6. Describe structure of a typical Java program.

- 7.Explain the basic features of Object Oriented Programming.
8. Explain the advantages of Java. Distinguish between class & object.
- 9.What are command line argument (CLA)? How they are useful
10. How Java is more secured than other language? What do you mean by Data Abstraction?
11. Why Java is robust programming language?

12. Explain the meaning of each word: "public static void main (String args[])"
13. What is Separator? List the various Separator in Java
14. What is Token List the various token supported in Java
15. What is Operator 7 List the various Separator in Java.
16. Difference between String & String Buffer in Java. Difference between String & StringBuilder in Java.

17. What is Wrapper Class in Java? Explain with proper example, What do you mean by Autoboxing & Unboxing in Java? Explain with example.
18. Explain the different types of jumping statement in Java. What is type casting? Why is it required in Programming?
19. Explain the function of different types of String functions or method in Java. 9.
Explain Garbage Collection System in Java?
20. Classify constant in Java.

21. Write a code to create an integer array in Java,

22. Explain the concept operator precedence & associativity with example

23. What is class? How does it accomplish data hiding?

24. Difference between Class & Object.

25. What are objects? How they are created from a class?

26. Explain the purpose of 'this', 'final', 'static' keyword in Java with example.
27. Demonstrate the concept of Method Overloading in Java. Explain Method Overriding using Java program.
28. Write down the difference between method overloading & method overriding. (Run time polymorphism & Compile time polymorphism).
29. What happens if we declare member function as a static in a class? Answer with example.
30. When do we declare a method as final? with example.

31. What is constructor? State the properties of a Constructor.
32. Classify constructor. Explain the different types of constructor by using Java Code.
33. How do we invoke a constructor?
34. Write a program that illustrate the concept of "array of object" in java.
35. Write a short note on final, finally & finalize keyword in Java with example.

36. Give an example of constructor overloading in java.
37. What is Dynamic Method Dispatcher? With Example
38. What are the purpose of Finalize() method?
39. Explain with example the concept of "passing object to a method" in Java ?
40. Explain the purpose of Super keyword in Java with example.

41. What're the types of Operators. Explain each Arithmetic, Assignment, Logical, Bitwise, Relational with examples. What is Array. WAP to find highest element from an Array.

42. What is Polymorphism. Which inheritance java does not support? What is interface? Which keyword we use to write inheritance. Difference between interface & abstraction. Give examples.

43. What is Inheritance. Types. Explain Single Inheritance, Multilevel Inheritance, Hierarchical Inheritance with examples. What is super class & sub class.

44. What is Abstraction? with example. Explain super keyword.

45. What is Encapsulation? Give an example. What're the types of Constructor. Give Example. Explain Thread Life Cycle with diagram. Explain different types of Errors.
