

Knowledge About Fruits

Apple

Apples are rich in dietary fiber and vitamin C. They contain antioxidants such as quercetin and are commonly eaten fresh, baked, or used in juices.

Banana

Bananas are an excellent source of potassium and vitamin B6. They provide carbohydrates for energy and are widely consumed as a quick snack.

Orange

Oranges are famous for their high vitamin C content. They also provide folate, potassium, and antioxidants that support immune function.

Mango

Mangoes contain vitamins A and C, along with beta-carotene. They are sweet tropical fruits used in desserts, smoothies, and savory dishes.

Strawberry

Strawberries are rich in vitamin C, manganese, and antioxidants. They have a high water content and are often eaten fresh or used in jams.

Grapes

Grapes contain vitamins C and K and antioxidants such as resveratrol. They can be eaten fresh, dried into raisins, or used to make juice.

Pineapple

Pineapples contain vitamin C and bromelain, an enzyme that helps digest proteins. They are commonly used in fruit salads and desserts.

Watermelon

Watermelon is made up of about 90% water, making it highly hydrating. It contains vitamins A and C as well as the antioxidant lycopene.

Papaya

Papaya is rich in vitamin C, vitamin A, and the enzyme papain, which aids digestion. It is commonly eaten fresh or blended into smoothies.

Kiwi

Kiwis provide vitamin C, vitamin K, vitamin E, and fiber. Despite their small size, they are nutrient-dense and have a tangy flavor.

General Facts

Most fruits are naturally low in fat and sodium while providing fiber, vitamins, minerals, and antioxidants. Eating a variety of fruits every day supports a balanced diet and overall health.
